

## Applying Eclipse IDE Settings

### 1. Text editors settings

- go to **Window -> Preferences -> General -> Editors -> Text Editors**

- click on the “*configure visibility*” link

2. Add path and symbols settings (eclipse-path-and-symbols-settings.xml)
  - go to **Project -> Properties -> C/C++ General -> Paths and Symbols**
  - choose “**Includes**” tab -> **GNU C**
  - click on the button “**Import Settings ...**”
  - click on the button “**Browse...**” and specify the path to the file “**eclipse-path-and-symbols-settings.xml**”
  - click on the button “**Finish**”
3. Add code format settings (eclipse-code-format.xml)
  - go to **Project -> Properties -> C/C++ General -> Formatter**
  - set the checkbox “**Enable project specific settings**”
  - click on the button “**Import...**” and specify the path to the file “**eclipse-aonecompany-code-format.xml**”
  - click on the button “**Apply and Close**”
4. Add template for header files (eclipse-pmd-header-file-template.xml)
  - go to **File -> New -> Header File**
  - choose “**Default C header template**” from “**Template**” list
  - click on the button “**Configure...**”
  - click on the button “**Import...**” and specify the path to the file “**eclipse-header-file-template.xml**”
  - click on the button “**Apply and Close**”
  - close the window “**New Header File**”
5. Add template for source files (eclipse-pmd-source-file-template.xml)
  - go to **File -> New -> Source File**
  - choose “**Default C source template**” from “**Template**” list
  - click on the button “**Configure...**”
  - click on the button “**Import...**” and specify the path to the file “**eclipse-source-file-template.xml**”
  - click on the button “**Apply and Close**”
  - close the window “**New Source File**”
